TITLE:AESTHERIS // OS.

SUBTITLE:DEEP SPACE LOGISTICS & ORBITAL INTELLIGENCE.

PROJECT VISION & CORE MISSION

01

HEADER: 14 ACTIVE MISSIONS

BODY: REAL-TIME MONITORING OF ALL DEEP-SPACE VESSELS.

02

HEADER: 2.4B KM TRACKED

BODY: EXTENSIVE TELEMETRY COVERAGE ACROSS THE MULTI-PLANETARY CORRIDOR.

03

HEADER: SYSTEM_NOMINAL

BODY: FUEL LEVELS AT 88.42% WITH OPTIMIZED VELOCITY METRICS.

TECHNICAL ARCHITECTURE (THE STACK)

- Frontend: HTML5 and CSS3 for a responsive, high-contrast terminal UI.
- Design: Custom “OS” aesthetic featuring real-time telemetry simulations and orbital mapping animations.
- Environment: Developed in VS Code using local server hosting (127.0.0.1).
- Version Control: Project managed and deployed via GitHub for mission-critical stability.

INTERFACE & USER EXPERIENCE

- Header: Command & Control UI
- Features:
- Manifest Dashboard: Dark-mode optimized terminal for reduced eye strain during long-haul space travel.
- Target Vectoring: Dynamic visual feedback for orbital trajectory mapping.
- Access Control: Secure login protocols and centralized command panels.

REAL-TIME TELEMETRY

- Header: Mission Control Status
- Visual Suggestion: A screenshot of your Manifest page showing the “System Nominal” status and velocity data.
- Live Metrics:
- Velocity: Currently tracking at 27,450km/h.
- Fuel Levels: Real-time monitoring (currently 88.42%).
- ETA Mars: Integrated countdown clock (142 days remaining).

FUTURE ROADMAP

- Header: Expanding the Network
- Next Steps:
- Research Integration: Connecting deep-space research modules to the main OS.
- Crew Management: Expanding the “Crew” directory for multi-ship coordination.
- Public Deployment: Moving from local host to live GitHub Pages hosting.
